

Project Development Phase Performance Test

Date	29 September 2026
Team ID	SWTID-2026-5115
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	This project uses ServiceNow instead of Tableau. The data rendered is the Institution Details table (u_institution_details), shown as a list view. The administrator sees all records (ECE, EEE and CSE), while the EEE User sees only the EEE record because of the Script-Controlled ACL.  Administrator view: all 3 branch records rendered  EEE User view: only the EEE record (STU200) rendered

S.No.	Parameter	Screenshot / Values
2.	Data Preprocessing	Data was prepared inside ServiceNow before use: - Created the custom table Institution Details with 7 fields: Student Roll Number, Student Name, Faculty Name, Branch, Email, Phone Number and Description. - Defined Branch as a Choice field with the values ECE, EEE and CSE. - Entered sample student records (STU100 – ECE, STU200 – EEE, STU300 – CSE).  Table columns of Institution Details  Branch choices: ECE, EEE and CSE
3.	Utilization of Filters	The Read ACL uses a data filter condition Branch is EEE together with the role bb1, so a bb1 user can see only EEE branch records. The list can also be filtered by the Branch column. Administrators bypass the filter and see all records.  Read ACL filter condition (Branch is EEE) and advanced script

S.No.	Parameter	Screenshot / Values
4.	Calculation fields Used	Not applicable. No Tableau calculated fields are used in this project. The equivalent logic is the server-side ACL script below. <pre>(function () { if (gs.hasRole('admin')) { return true; } if (gs.hasRole('bb1')) { return true; } return false; })();</pre>
5.	Dashboard design	No of Visualizations / Graphs – 0 (not applicable). The data is presented through the ServiceNow Institution Details list view with the Branch, Faculty Name, Student Name and Student Roll Number columns.  Institution Details list view
6.	Story Design	No of Visualizations / Graphs – 0 (not applicable). No Tableau story is used. Access results are verified through ServiceNow lists and forms, and the Access Controls related list of the table shows the four ACLs (create, read, delete, write).  Access Controls list of u_institution_details
