1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the Script-Controlled ACL – Restrict Record Access Based on Field Value project at the time of the release to User Acceptance Testing (UAT). The project secures the Institution Details table in ServiceNow so that Read access depends on the user's role and the record's Branch value, while Create, Write and Delete are limited to roles bb2, bb3 and bb4. All 8 UAT test cases were executed and passed, and no open issues remain at release.

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved. No defects were recorded during UAT; the ACL conditions and script were reviewed and re-tested in Sprint-4 (USN-16).
