|----------------------|---------------------------------------------------------------------|
| <b>Date</b>          | 29 September 2026                                                   |
| <b>Team ID</b>       | SWTID-2026-5115                                                     |
| <b>Project Name</b>  | Script-Controlled ACL – Restrict Record Access Based on Field Value |
| <b>Maximum Marks</b> | 4 Marks                                                             |

### Step 1: Brainstorm and Idea Listing

| S.No | Team Member       | Idea / Suggestion                                                           | Category               | Group No. |
|------|-------------------|-----------------------------------------------------------------------------|------------------------|-----------|
| 1    | Sheerin Farhath F | Create users and assign required roles in ServiceNow                        | User & Role Management |           |
| 2    | Shalini M         | Configure script-controlled ACL for Read, Create and Write operations       | Access Control / ACL   |           |
| 3    | Shivani Palani    | Configure Delete ACL and verify the access permissions                      | Access Control / ACL   |           |
| 4    | Seshriya P        | Create the Institution Details table with required fields and branch values | Table Configuration    |           |
| 5    | Shanthini K       | Implement role-based access to restrict records based on field value        | Security / ACL         |           |
| 6    | -                 | -                                                                           | -                      | -         |

## Brainstorming & Idea Prioritization Template

### Step 2: Idea Prioritization

| Group No. | Final Idea                                                          | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|---------------------------------------------------------------------|-------------------------------|------------------------------|----------|-------------------|
| 1         | Script-Controlled ACL – Restrict Record Access Based on Field Value | High                          | High                         | 1        | Yes               |
| 2         | Role-Based Access Control using ServiceNow ACLs                     | High                          | High                         | 2        | No                |
| 3         | Branch-Based Record Access Restriction                              | High                          | High                         | 3        | No                |
