

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-5115
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Define Problem Statements (Customer Problem Statement Template):

The project aims to identify the access-control problem faced by ServiceNow administrators while managing institution and student records. Users should only be allowed to access records according to their assigned roles and branch. The problem statement focuses on preventing unauthorized access to records belonging to other branches while allowing administrators to retain full access. This helps ensure secure and role-based record management using Script-Controlled ACLs.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator managing institution/student records	Restrict users from accessing records based on their branch	Users may be able to view records belonging to other branches	Proper field-level/record-level access control is required to protect sensitive student information	Concerned about unauthorized record access
